Company history/background

Testing laboratory, and consulting entity - training in quality and environment, with 20 years of experience.

Run by two working partners with pharmacy degrees who established the company as a limited liability company in 2002.

The company has a very well-established client portfolio.

It is currently fully operational and has growth prospects.

Sample analysis laboratory: water, food, food products, cosmetics, environmental samples, etc.

Training and technical advisory entity: in food hygiene and safety (food handling), quality management and environmental management.

The activities are carried out by the two founding working partners of the company.

The company has the necessary equipment for the development of its activities and the premises are rented.

Unique selling points

The company has real growth opportunities in several sectors (food industry, cosmetics industry, pharmaceutical industry and environment)

Other

Ideal for a couple with university degrees in health sciences who want to become independent.

Also for expanding companies in the testing laboratory sector.

Or equally for investors who want to diversify their business portfolio.
