**Company history/background**

Digital real estate agency specializing in property rentals for sale.

We use virtual reality so that clients can view properties from their homes through a 360° virtual tour, both independently and during a virtual visit with a real estate agent, where topics such as features, price, deposits,

and the applicant's income are discussed. This way, we achieve a greater number of visits in less time, renting the property in question faster.

The company began operations in March 2020, but due to disagreements among the founding partners, we have decided to dissolve the limited liability company and go our separate ways. However, not before attempting to sell what has cost us so much time and money: the company's creation, notary services, web development, partnerships with startups like Floorfy (for virtualizing properties) and Garantify (for verifying tenant creditworthiness), and accounts on major real estate portals.
