We own a 640-hectare property and are interested in leasing it for the installation of a wind and/or solar farm. The pastureland is located 10 km from the city of Ávila and has direct access from several points via a national highway. Furthermore, the power line for a nearby wind farm runs through the property. The construction of a highway, which will pass alongside the land, is also planned. We are seeking companies or investors interested in undertaking a project of this nature.
