Sale of Mining Exploitation company (C-7456) domiciled in a major population in Africa.

We are seeking an investment partner to establish a mining company. The plan is to conduct an exploration test followed by subsequent mining operations, depending on the results of this test. A geological study of the land is available. The potential profits are very high if the right locations are identified and the expected results are achieved. The main minerals to be extracted include gold, diamonds, bauxite, and manganese, with gold being the primary mineral due to its importance for export.

It is currently an expanding project that will be able to market to all countries in Europe.

They have thousands of hectares of land available for exploitation under concession granted by the country's government.

RRP €120,000 (Sale of 20% of the company shares)
