Sale of Biomass company (C-8243) domiciled in the province of Valladolid

This is a family business with over twenty-five years of experience in the renewable energy sector. They are pioneers in pellet manufacturing in Castile and León. They have been producing wood pellets since 2008, carefully controlling the entire process and offering the highest quality to their customers. They are certified Non-Hazardous Waste Managers in Castile and León. All their products undergo a recycling process at their facilities before being sold. Their wood pellets are made from high-quality hardwoods, providing excellent heat output and

durability. These characteristics make them particularly suitable for both heating systems and biomass stoves. Their pellets have been tested by the Analysis and Testing Laboratory. Their bales are made of premium pine wood, free of chemical additives, and are suitable for animal bedding due to their cleanliness and absorbency. As manufacturers with ample indoor storage, they can supply wood shavings year-round, ensuring a reliable supply and optimal shaving conditions. They offer bales of wood shavings in various varieties to meet the specific needs of each client.

They have five buildings for manufacturing, production storage and management, under a property ownership regime.

Target Sale Price: €1,050,000 (includes facilities)
